NOAH ROTHSCHILD

SOFTWARE ENGINEER

Cape Town, South Africa | +27 82 389 6179 | nprothschild@gmail.com
github.com/Noah-Rothschild | linkedin.com/in/noah-rothschild | noahrothschild.dev

PROFILE

Third-year Software Engineering student seeking junior-level or internship experience in full-stack development with a focus on cloud technologies and AI-native coding workflows. Comfortable across the stack with Python, TypeScript and experienced in API integration. Eager to contribute while growing alongside an experienced engineering team.

SKILLS

Frontend: JavaScript, TypeScript, React, Next.js, HTML, CSS, Tailwind
Backend: Python, PHP, Django, REST APIs, JWT, Firebase
Database: MySQL, PostgreSQL, Firestore
DevOps & Tools: Git / GitHub, AWS, Vercel

EDUCATION

BSc Information Technology: Software Engineering, Eduvos Cape Town *Feb 2024 – Nov 2026 (expected)*

- Current Coursework Average: 80%
- Notable coursework: Cloud-Based Technologies, Python Programming, Network Security, Database Systems, Mobile Application Development, IT Project Management, Data Structures & Algorithms, Object-Oriented Analysis and Design, Operating Systems, Ecommerce and Web Services

PROJECTS

Chefbook: Full-Stack Recipe Recommendation App

- Built a full-stack web application that recommends recipes based on ingredients a user has on hand, using a React frontend, Django backend, and PostgreSQL database.
- Implemented JWT-based user authentication and integrated the Spoonacular API for live recipe data.
- Designed and built RESTful API endpoints to support dynamic, ingredient-based recipe queries.

Rising Tide: C-2-C Ecommerce Website

- Built a solo, full-stack customer-to-customer marketplace with three distinct roles (Buyer, seller and admin) using PHP, MySQL, HTML/CSS, and JavaScript.
- Designed role-based access control separating buyer, seller, and admin experiences, including a seller-facing analytics view and an admin panel for platform management.
- Implemented cart and product-listing logic with a MySQL relational schema handling users, listings, and transactions.

Cape Safe: Tourist Safety Mobile App

- Tech lead on a six-person team building a cross-platform safety app for tourists in Cape Town, using React Native, TypeScript and Expo, with Firebase Authentication and Firestore.
- Built a crime-risk heatmap layer from SAPS statistics for 60 police stations with a weighted 0–100 risk score, integrating the Google Maps and Google Places APIs.
- Implemented live group location sharing with invite codes, one-tap emergency calls and Firestore security rules, and shipped Android development builds through EAS.

WORK EXPERIENCE

Barista, Poppideli Hermanus *Nov 2022 – Oct 2023*

- Managed front-of-house operations, including configuring and troubleshooting Yoco point-of-sale hardware.
- Used point-of-sale data to guide day-to-day stock management, developing an eye for practical, data-informed decisions.
- Worked in a fast-paced customer-facing role, building communication and time-management skills.

COURSES

Data Structures & Algorithms in Python, Udemy *Jan 2025 – Mar 2025*
